PUSH PIER SYSTEM

# Permanently Stabilize Your Foundation

**THE PUSH PIER SYSTEM** from Supportworks® will permanently stabilize a home's settling foundation and, in many cases, raise it back up.

Engineered steel tube sections are hydraulically driven through steel foundation brackets, past unstable soils, to competent load-bearing soil or bedrock deep in the ground.

**Push piers stabilize the foundation from further settlement, help close cracks and improve function of windows and doors, and have the potential to lift the home back toward its original elevation. Regain property value, quality of life and peace of mind right away.**

### *Guaranteed.*

The push pier system is backed by a 25-year product warranty from Supportworks as well as a service warranty from your local contractor.

## PUSH PIER ADVANTAGES

- Addresses the root cause of foundation settlement
- Engineered system ensures piers won't bend
- Minimal disturbance and quick installation
- Reaches much greater depths than other options
- Galvanized pier tubes resist corrosion
- Load testing during installation ensures optimal performance
- Can be installed from inside or outside the home
- Below-grade solution is concealed from sight
- Can often raise foundation back up to level

## HOW DID YOUR FOUNDATION GET THIS WAY?

After a home is built, the soil below the foundation can compress under its weight. Dry conditions cause the soil to shrink, while too much rain causes it to soften or wash out completely. This movement of the soil, from right underneath the foundation to deep below the surface, results in cracked walls, doors and windows that stick, uneven floors, and a settling home.

## THE PROVEN SOLUTION

1

Expose footing and prepare for bracket.

2

Secure bracket to the footing and drive piers into the soil.

3

Transfer weight of the home, through piers, to competent, deep soils.

4

Replace soil and clean up the installation area.

**FIX & PROTECT** | Install push piers on areas of the foundation that don't yet show signs of settlement to protect your largest investment.
