

Basement Water Control System

The Proven Method for Preventing Wet Basements

The **DryTrak®** Basement Water Control System combines superior materials and practical design to remove seepage from the troublesome floor-wall joint and direct it to a sump pump or drain. The removal of this water lowers the water table around your foundation, thus relieving hydrostatic pressure. The **DryTrak®** system is very effective on all types of foundations including poured concrete, brick, block, stone, etc.

The patented **DryTrak®** system will keep your basement clean and dry so you can use the space for storage, recreational purposes or to finish for additional living space.

DryTrak® is the logical solution for a water problem with a monolithic foundation—footing & floor are one piece.

Reliable and Permanent

The **DryTrak®** system has been installed in thousands of basements across the United States and Canada. There is no costly digging, or damage to landscaping, sidewalks, porches, decks or lawns outside. There is no jackhammering around the basement floor inside avoiding damage to the floor & structural footings and all the dust that goes with it. The **DryTrak®** system will never clog like sub-surface drains do because it is not sitting in the mud. The **DryTrak®** system can be installed whether your basement is wet or dry and is the most affordable system available.

Finished **DryTrak®** and **SuperSump®** installation. (over)

DryTrak[®]

Basement Water Control System

The **DryTrak[®]** system with **SuperSump[®]** (shown at right) is the perfect solution to your wet basement! The **SuperSump[®]** drains water from the **DryTrak[®]** and from below the basement floor and discharges it out of the basement. Included with the **SuperSump[®]** is a reliable 1/3 hp pump and a **WaterWatch[®]** alarm system to alert you to pump or power failure **BEFORE** the water rises above the floor level. A most attractive feature is a removable, two-piece airtight lid to cut down on noise, prevent objects from falling in and to keep moisture, insects and odors from coming out of the sump.

The **SuperSump's[®]** features allow it to perform quietly and efficiently, with smooth operation and water flow for years to come. Ask your dealer about the details of your application.
